Submersible Pressure System

GOOD DESIGN

A self-priming jet pump with a high hydraulic performance and a premium pressure capacity

BUILT IN CONTROL SYSTEM

Pump operates automatically – no extra wiring or control modules, the pump will switch off when there is no water and runs a self-test every 72 hours

QUALITY STAINLESS STEEL

Stainless steel body, shaft and impeller, coupled with a two pole induction motor, this pump will last the distance

GREAT PERFORMANCE

Capable of delivering 50 Litres per minute, enough water for general day to day use in a three bedroom home

SAVE TIME AND MONEY

Your plumber can simply run a connection to the house and it's ready to go, no extra set-up costs with building a pump house or connecting a pressure switch or pressure tank and no need to find or prepare a suitable place to install it

QUIET

If you install a pump inside your ELETANK the noise of it operating is minimal because of the insulating and absorbing properties of an ELETANKs concrete walls therefore you won't wake the house up just because you want a drink of water in the middle of the night.

**SUPPLIERS and STOCKIST of FULL RANGE
OF PUMPS AND ELECTRIC MOTORS**
